## Renault calling entrepreneurs to come and develop the connected services of the future

Today, few cars on the road are without a navigation system. In the future, cars will be even more extensively connected, and the service offering should expand, to become more attractive, dynamic – and fun.

To help an ecosystem of start-ups develop the connected services of the future, Renault and the Paris Region Innovation laboratory are joining forces and calling for applications on the subject of “Connected services and ICT for mobility”. This new incubator will open its doors in early March 2012 at the Paris Innovation Masséna site.

This calling is oriented to innovative companies set up less than four years ago, working in the sector of “Connected services and ICT for mobility”, and which are developing or finalizing a first product/service offering, already verified as matching market needs, with the market, and which are looking for an all-in incubation offering (private offices, customized individual support, specific activities and financing via Paris Innovation Amorçage).

The interested companies must send their applications between now and January 31, 2012 by clicking on this [link](#).
